RESEARCH MILESTONE / STORAGE-POWER CONSENSUS

ESTABLISHED

First clean consensus-eligibility result in the NE-01 test model.

From counterexamples and adversarial reviews to a working eight-epoch run.

8 / 8	16 / 0	512	64 / 0

WHAT THE SCAFFOLD NOW CONNECTS

FUNDED DATA › SEALED SECTORS › BEACON AUDITS › POWER LEDGER › ELIGIBILITY

Audit-only issuance. No voting power from receipts, genesis, or foreign histories.
Replay defenses, conservation checks, and revocation are covered by tests.

NEXT CHAPTER

MAINNET ENGINEERING / MON 09 NOV

Planned engineering kickoff - not a live network launch.

RESEARCH SCOPE / NEXT SECURITY GATE

Established is a test-model eligibility result, not a production-security certification. The current sealing profile does not yet enforce a storage/time margin: with 1 KiB of cached finals, a checkpoint was regenerated in 4.1 ms versus a 5 s laboratory window. Beacon security, stronger resource binding, external testing and hosted CI remain on the engineering path.
